1. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1,7,13 are rejected under 35 U.S.C. 102(b) as being anticipated by McNaughton 6,296,079.

McNaughton discloses two different models of ATM, i.e. the prior art model of figure 1 and the invention of figure 2. Both have a receipt printer 22, a monitor 20 with function keys 21, a card reader 14, a keypad 16 and a cash dispenser 18. The method of use of the ATM and the method of providing the ATM are both inherent within the apparatus of McNaughton.

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein

were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 5,6,11,12 are rejected under 35 U.S.C. 103(a) as being unpatentable over McNaughton 6,296,079.

McNaughton discloses that which is seen above. McNaughton does not disclose the specific arrangement of locations of the individual components as currently claimed. However, McNaughton does disclose the monitor and function keys in close proximity to each other and positioned in the top portion of the ATM. McNaughton also discloses that the card reader and keypad are positioned below the monitor in a separate portion of the ATM. McNaughton does not disclose that the receipt printer is positioned in the same vertically oriented portion as the keypad and the card reader. McNaughton also does not teach that the currency dispenser is in a third lower portion of the ATM. However, this is merely a rearrangement of parts. As the examiner cannot find any evidence of criticality as to the location of the receipt printer or the currency dispenser in the current specification, the exact location of these elements is a matter of design choice. It would have been obvious to one of ordinary skill in the art at the time of the invention to locate the receipt printer adjacent to the keypad and card reader and to position the currency dispense in a lower portion in order to make the overall system ergonomically "comfortable".

7. Claims 2-4,8-10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

8. The following is a statement of reasons for the indication of allowable subject matter: the prior art of record fails to teach or fairly suggest, in conjunction with all the other limitations of the claims, prompting the user to move the hand between the upper, middle and lower portions of the ATM in a pattern that is common to both models of ATM as in claims 2 and 8.

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Swaine 2002/0139842, Anderson 2002/0074393, Coventry 2002/0060241 and Zhong 6,533,170 all disclose terminals with front fascias including displays, card readers, and keypads.
